

Flick Freight

Game Design Document

A physics loading game for the web: drag, aim, and throw cargo into the truck.

96 levels · 9 worlds · 1 to 3 stars per level

Engine: Godot 4.3 (web export) · Target portal: CrazyGames

Version 1.0 · November 2026 · Written from the game's repository (scripts/levels.gd, README, docs/)

About this document. A Game Design Document (GDD) describes what a game is and how it plays: its goal, rules, mechanics, content and progression. It is the game industry's counterpart to a Product Requirements Document (PRD). Everything here reflects the game as it is built in the repository today, not a plan.

1. Overview

Flick Freight is a casual 2D physics game. The player stands at a loading dock and throws cargo into a waiting vehicle with a slingshot-style drag. Each level gives a fixed queue of cargo and a vehicle to fill. Loading enough cargo passes the level; loading all of it earns three stars.

The game is short-session and skill-based: no timers, no randomness. Every moving thing runs on the level clock, so a level plays out the same way on every restart and players can learn its rhythm.

Item	Value
Genre	Physics puzzle / skill-throw (casual)
Platform	Web (HTML5), desktop and mobile browsers; mouse or touch
Engine	Godot 4.3, single-threaded web export
Session length	About 30–90 seconds per level
Content	96 levels across 9 worlds; 9 cargo types, 11 vehicles, 8 moving obstacles
Audience	All ages; casual web players (CrazyGames portal)
Monetization hooks	CrazyGames SDK v3 gameplay events (start/stop, happytime)

Harbor: the dock on the left, a forklift patrolling the quay, a bounce pad and the truck on the right.

2. Goal and core loop

Player goal: load the vehicle with as much cargo as possible from the queue at the dock. The long-term goal is to unlock and finish all nine worlds and collect every star.

Core loop (one throw):

- **Read** the scene: vehicle position and motion, obstacles, wind flag, the next cargo in the queue.
- **Aim:** press anywhere and drag back. A dotted arc previews the throw (in later levels the arc gets shorter, so players rely on feel).
- **Release** to throw. The cargo flies under real physics.
- **Result:** the cargo lands in the vehicle (delivered), misses, or breaks. The HUD counter updates.
- **Repeat** until the queue is empty, then the level is scored.

Level loop: intro banner (when a new mechanic appears) → throws → stacks settle → results screen with stars → next level or retry.

Meta loop: win levels → open the next level, Act II and the next world → collect stars shown on the menu and level select.

Loose cargo. Delivered cargo is not glued down. Stacks can shift or topple, and anything that falls out stops counting. The game waits a moment for stacks to settle before scoring, so stacking well matters as much as aiming well.

3. Controls

Input	Action
Press, drag back, release (mouse or touch)	Aim and throw; longer drag = more power
P	Pause
R	Restart level
Home button (pause / results)	Back to main menu

4. Scoring and stars

Most levels score by how much cargo ends up in the vehicle:

Stars	Standard levels	Few-throws levels (helicopter, balloon)
★	Load the pass goal	Load the required amount
★★	Load the 2-star goal	…within a set number of throws
★★★	Load every piece of cargo	…within fewer throws

Example: level 1 has 4 boxes; 2 delivered = 1 star, 3 = 2 stars, all 4 = 3 stars. The courier motorcycle levels give 3 boxes for a tiny rack: 1 passes, 3 is "legendary". Total available: 288 stars (96 × 3).

5. Progression and unlocks

- Each world has an **Act I** and (for the first six worlds) an **Act II** of 5 harder levels that reuse the world's theme with new vehicles and moving obstacles.
- Levels in an act unlock one after another: win a level (any stars) to open the next.
- Act II opens once the world's Act I is complete.
- The next world opens once every level of the current world (Act I and Act II) has been won at least once.
- A won level never locks again. Progress (stars, mute, tutorial) is saved locally on the device.
- The main menu opens on the next unbeaten level; PLAY starts it, LEVELS opens level select (one page per world).

World order: Town → Woods → Desert → Harbor → Snow → Freight Yard → Downtown → Construction → Sky Port (the finale).

6. Cargo types

Cargo	Behaviour	First seen
Box	Standard, light, stacks well	Town
Heavy crate	Needs a stronger pull; good as a stopper	Town
Barrel	Tall, tips over; land it gently	Woods
Fragile	Each bump cracks it; the 3rd bump breaks it	Woods
Ice block	Slides until something stops it	Snow
Tire	Bounces; drop it in softly	Snow
Plank	Long, spins at a fixed rate in flight; counts at any angle; can form a shelf	Snow
Gas canister	Pops on a hard landing and knocks nearby cargo out	Freight Yard
Parcel	Flat; fits through the mail van's slot	Downtown

7. Mechanics

New ideas are introduced one at a time, each with a short banner the first time it appears.

Mechanic	What it asks of the player
Moving truck	Lead the throw: the vehicle drives back and forth
Pillar / low beam	Lob high over a pillar, or keep throws under a beam
Wind	Sideways push; the aim arc ignores it, so read the flag
Tall tailgate	Drop cargo in steeply from above
Bounce pad	Bank shots off a spring, including downward throws; never cracks fragile cargo
Ferry / open water	The truck bobs on waves; cargo in the water splashes (miss)
Icy truck bed	Everything slides on the bed
Multiple vehicles	Fill several at once (flatcars, two helicopters, van + food truck)
Few-throws scoring	Stars for efficiency instead of volume
Moving obstacles	Time throws around cranes, trees, windmills and more (section 9)

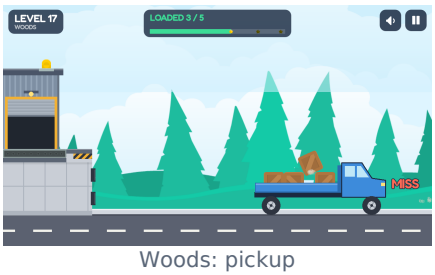

8. Vehicles

Vehicle	World	Twist
Truck	All early worlds	Open bed with a rear wall; can move, ride a ferry, or have an icy bed
Courier motorcycle	Town	3 boxes on a tiny rack
Garbage truck	Town, Downtown	Small hopper: throw high and steep
Pickup	Woods	Short bed, low sides: soft throws stay, hard ones slide out
Dump truck	Desert, Construction	Tilted bed; land heavy crates first as stoppers
Flatbed	Freight Yard, Construction	No sides: stack neatly and keep balance
Flatcars (train)	Freight Yard	Roll past once; fill each as it passes
Mail van	Downtown	Parcels through a slot in the back door: throw flat
Food truck	Downtown	In through the serving window, under the awning
Helicopter	Sky Port	Net on a swinging cable; later bobs and drifts
Hot-air balloon	Sky Port	Basket rises and sinks; throw under the balloon

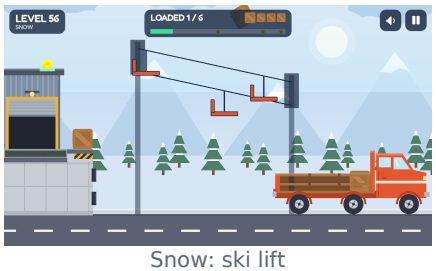

9. Moving obstacles

Obstacles move on the level clock, so they are identical on every restart. Warning lights and sounds tell the player what is coming.

Obstacle	World	Behaviour
Gantry crane	Harbor	Swinging container; listen for the creak
Forklift	Harbor, Construction	Patrols the quay and raises its pallet into the path
Swaying tree	Woods	Treetop leans in the wind; throw over or past it
Windmill	Desert	Thread throws between turning blades
Tumbleweed	Desert	Bounces across the sand and can bat cargo away
Ski lift	Snow	Chairs move along a cable; land and ride, or bank off them
Conveyor	Freight Yard, Construction	Carries cargo toward the truck
Tower crane	Construction	Beam swings and slides along the jib

Woods: pickup

Snow: ski lift

Sky Port: helicopter

10. The nine worlds

Each world has its own backdrop, music loop and lead vehicle. Level numbers are the ones players see.

#	World	Levels	Act I focus	Act II focus	Boss level
1	**Town**	1–10 (10)	Tutorial world. Throwing, moving trucks, heavy crates.	Courier motorcycle and garbage truck.	10 Last Delivery
2	**Woods**	11–20 (10)	Pillars, barrels, fragile cargo, low beams.	Swaying trees and the pickup.	20 Woods Boss
3	**Desert**	21–30 (10)	Headwind and tailwind, tall tailgates.	Windmill, tumbleweed and the dump truck.	25 Final Run; 30 Desert Boss
4	**Harbor**	31–45 (15)	Bounce pads, bank shots, trucks on ferries, open water.	Gantry crane and forklift.	40 Harbor Run; 45 Dock Boss
5	**Snow**	46–57 (12)	Ice blocks, icy truck beds, bouncy tires, spinning planks.	Ski lift with ice cargo.	57 Snow Boss
6	**Freight Yard**	58–67 (10)	Gas canisters; "Grand Finale" with one of everything.	Conveyor, flatbed, rolling flatcars.	62 Grand Finale; 67 Yard Boss
7	**Downtown**	68–77 (10)	Mail van slot, food truck window, garbage truck, wind.	(single act, 10 levels)	77 Downtown Boss
8	**Construction**	78–86 (9)	Tower cranes over dump trucks and flatbeds, forklift, conveyor.	(single act, 9 levels)	86 Site Boss
9	**Sky Port**	87–96 (10)	Finale: helicopter nets and hot-air balloons, few-throws scoring.	(single act, 10 levels)	96 Sky Boss

Town (levels 1–10)

- **2** On The Move: Trucks drive back and forth. Lead your throw!
- **3** Heavy Crate: Metal crates are heavy. Pull back harder!
- **4** Rush: A faster truck and heavy crates. Stack it full!
- **7** Courier: 3 boxes, one tiny rack. One is easy, two is hard, three is a legend.
- **9** Garbage Truck: Drop it through the hopper: throw high and steep.
- **10** Last Delivery: Last stop for the courier. Stack all 3 boxes on the rack!

Woods (levels 11–20)

- **11** Roadblock: Lob it high over the pillar.
- **12** Barrel: Barrels are tall and tip over. Land them gently.
- **13** Fragile: Every bump cracks it. The 3rd bump breaks it!
- **14** Low Beam: Keep your throws under the beam.
- **16** Swaying Tree: The treetop sways in the wind. Throw over it, or past it as it leans away.
- **17** Pickup: Short bed, low sides. Soft throws stay in; hard ones slide out!
- **20** Woods Boss: A pickup behind two swaying trees, in a tailwind. Stay soft.

Desert (levels 21–30)

- **21** Headwind: The dotted line ignores wind. Watch the flag, throw long!
- **23** Tall Gate: This truck has a high tailgate. Drop it in from above.
- **25** Final Run: Everything at once. Good luck, driver!
- **26** Windmill: Thread your throws between the turning blades.
- **27** Dump Truck: The bed tips back. Land heavy crates first as stoppers.
- **28** Tumbleweed: It bounces across the sand. Don't let it bat your box away.
- **30** Desert Boss: Dump truck behind a windmill. Crates first, then the rest.

Harbor (levels 31–45)

- **31** Bounce Pad: Throw low under the beam and bounce it in!
- **32** Bank Shot: Sneak under the pillar, then off the pad.
- **34** Moving Target: Bounce it in while the truck drives back and forth.
- **37** Ferry: The truck rides the waves. Time your throw!
- **39** Bounce To Board: Bank it off the pad onto the ferry.
- **40** Harbor Run: Pads, wind and a ferry. Show the harbor how it's done!
- **41** Crane: The container swings. Listen for the creak and time it!
- **42** Forklift: It patrols the quay. Bounce off the pad behind it.
- **44** Pallet Lift: The forklift raises its pallet into your path. Throw while it is down!
- **45** Dock Boss: A ferry behind a swinging container. Timing is everything.

Snow (levels 46–57)

- **46** Ice Block: Slippery! It slides until something stops it.
- **47** Icy Truck: The whole bed is slippery. Good thing it has a tall tailgate!
- **48** Tires: Tires bounce! Drop them in softly.
- **50** Planks: Planks spin as they fly. A tilted plank still counts!
- **52** Shelf It: A plank on top of crates makes a shelf for fragile cargo.
- **53** Ski Lift: Land on a chair and ride it, or bank off it into the truck.
- **57** Snow Boss: Bank off the chairs into an icy truck.

Freight Yard (levels 58–67)

- **58** Gas Cans: Land them softly or they pop and scatter the load!
- **59** Order Matters: Keep cans away from fragile cargo.
- **60** Rush Hour: Moving truck, tailwind, heavy crates. Stack them tight!
- **62** Grand Finale: One of everything. You've got this, driver!
- **63** Conveyor: The belt carries cargo toward the truck. Drop it on gently.
- **64** Flatbed: No sides at all. Stack it neatly and keep it balanced.
- **65** Flatcars: The train rolls by. Fill each car as it passes.
- **67** Yard Boss: Three flatcars roll by, and they won't come back. Fill them all!

Downtown (levels 68–77)

- **68** Mail Van: Parcels go through the slot in the back door. Throw flat!
- **70** Food Truck: In through the serving window: under the awning, over the counter.
- **73** On The Round: The mail van won't stop for you. Lead your throw.
- **77** Downtown Boss: Parcels only count in the van, boxes only in the food truck. And neither will stop for you!

Construction (levels 78–86)

- **78** Tower Crane: The beam swings and slides along the jib. Wait for your gap.
- **86** Site Boss: Stack the flatbed while the forklift patrols and the beam swings.

Sky Port (levels 87–96)

- **87** Helicopter: Drop cargo into the hanging net. It swings: time your throw!
- **89** Bobbing: The pilot can't hold still. Watch the net rise and fall.
- **91** Drifting: Now it drifts across the pad too. Lead the net.
- **92** Hot-Air Balloon: The basket rises and sinks. Throw under the balloon, not over it!
- **94** Two Helicopters: Two nets, swinging out of step. Fill both!
- **96** Sky Boss: Drifting, swinging, bobbing, in a crosswind. Every throw counts.

11. Difficulty curve

- **One new idea at a time.** Each mechanic gets an intro level, then is combined with earlier ones, and each world ends on a boss level that uses everything.
- **Shrinking aim guide.** The dotted arc shows the whole path in level 1 and only 30–40% of it in late levels.
- **Act II as an optional-feeling remix.** Each early world's Act II adds a vehicle or moving obstacle, with gentle first levels (6 plain boxes) before the boss.
- **Fair repetition.** No randomness: failing teaches the timing for the next attempt.
- **Tuned by bot.** A QA bot plays every level with perfect aim and with simulated human aim error; levels the "human" bot cannot clear get looked at.
- Four levels were retired as not fun (Snow height-limit/truck-swap levels and one Construction level); they keep their IDs so saves stay valid.

12. Presentation: art, audio, UI

- Side-view 2D, flat cartoon style. Kenney CC0 sprites plus code-drawn backdrops and vehicles; Fredoka font.
- Each world has its own music loop; sound effects for throws, hits on wood and metal, breaks, splashes, bounces, delivery and win/lose.
- HUD: level name, "LOADED x / y" counter with star marks, mute and pause. Banners introduce mechanics; pop-ups show SWISH!, MISS and similar feedback.
- Screens: main menu over a live level, level select with one page per world and lock messages, pause, results with stars.
- Readable at CrazyGames' smallest frame (907×510).

13. Platform and technology

- Godot 4.3, GDScript; single-threaded web export with a custom HTML shell.
- All level data lives in one file (scripts/levels.gd); a level is a dictionary of cargo, goals, vehicle, obstacles and intro text.
- Level IDs are permanent save keys; the displayed number follows play order.
- CrazyGames SDK v3: loading start/stop, gameplay start/stop on level start, pause, resume and end, and "happytime" when a world's last level is beaten.
- Target: 60 fps on the portal's minimum spec. Moving obstacles are kinematic bodies driven by the level clock.

14. Quality assurance

- QA bot plays every level (analytic solver for early levels, search solver after) and fails the build if any level cannot be passed.
- Frozen-level hash check and a parity snapshot make sure older levels never change by accident.
- Replay check (new levels must replay identically 3 times), layout check (no vehicle drives through an obstacle), save-compatibility tests.
- All checks run in CI on every branch; GitHub Pages hosts a test build.

Appendix A. Full level list

Cargo legend: b box, c heavy crate, r barrel, f fragile, i ice block, t tire, p plank, g gas canister, m parcel. Goals: ★ / ★★ / ★★★ = number delivered; for few-throws levels: load N, with ★★★ / ★★ throw limits.
